Subject: Letter of Recommendation for Columbia Engineering

To whom it may concern:

Columbia Engineering has provided professional engineering services on a number of high profile projects for the City of Newnan since 2013, including drainage improvements for West Washington St and the design and construction management of a four-lane urban type parkway with a multi-purpose path.

Columbia Engineering has been instrumental in working through the environmental studies, permitting, mitigation efforts, utility coordination, and assistance with public information outreach.

Columbia Engineering has been responsive, mindful of costs, and has addressed any obstacle or issue with sound judgment. They have proven time and time again an ability to work with staffs at the City, various property owners and contractors to resolve or eliminate problems. I consider them a very important part of the success of our projects.

We have been pleased with the quality of work performed by Columbia Engineering and the responsiveness of their staff. I would recommend Columbia Engineering to any government agency looking for professional engineering services.

If you have questions or would like to discuss our experience with Columbia Engineering, please feel free to contact me directly at (678) 673-5560.

Sincerely,

William M. Klahr, P.E.
Public Works Director/ City Engineer
City of Newnan, Georgia
